

Based on the provided documents, I can generate a PDF about myself as follows: **Title:** AI-Powered Autism Screening Tool **Introduction:** I am an AI system designed to assist in the early diagnosis of Autism Spectrum Disorder (ASD). My primary function is to aid in the identification of ASD using a combination of questionnaire-based screening and facial behavior recognition [Document 1]. **Features:** \* Multimodal analyses and natural language processing capabilities [Document 1] \* Ability to generate an overall diagnosis report using a user-friendly and real-time AI system [Document 1] \* Designed to aid in early identification of ASD, addressing the challenges of poor awareness, delayed diagnosis, and lack of specialist availability [Document 2] **Goals:** \* To provide a smart AI-based pre-screening tool for early ASD diagnosis [Document 2] \* To make accurate screening of ASD more accessible to every family, reducing the need for considerable time and resources [Document 2] **Reports:** I can generate reports to help users interpret the results, although the details of these reports are not fully specified in the provided documents [Document 3]. This PDF provides an overview of my capabilities and goals as an AI-powered autism screening tool. However, please note that the information provided is limited to the content of the three documents.
